

VaultZombie Privacy Policy

Last updated: September 12, 2026

This Privacy Policy explains how Zombie Platforms LLC ("Zombie Platforms," "VaultZombie," "we," "us," or "our") collects, uses, shares, and protects personal information in connection with the VaultZombie website at vaultzombie.com and the VaultZombie web application (together, the "Service").

We are the data controller for the personal information described here.

Zombie Platforms LLC
4009 W. Heffron Drive
Burbank, CA 91505
United States
Privacy contact: privacy@zombieplatforms.com

Please read this Policy together with our Terms and Conditions. By using the Service, you acknowledge the practices described below.

1. What VaultZombie is, in one paragraph

VaultZombie lets a person create a "vault" for a life event. Guests submit sealed text predictions about the future, and those predictions unlock on a schedule over weeks, months, or years. Understanding this flow helps explain why we collect what we collect and why some information stays sealed until a set date.

2. Who this Policy covers

- **Hosts.** People who create an account and build or manage a vault, including people who receive a vault as a gift and take it over.
- **Guests.** People who answer prompts at an event by scanning a QR code or opening a link. Guests do not create accounts.
- **Gifters.** People who buy a vault as a gift for someone else.
- **Visitors.** People who browse vaultzombie.com without signing in.

3. Information we collect

3.1 Information hosts provide

- Account details handled through our authentication provider (Clerk), such as name and email address, and sign-in credentials managed by that provider.

- Vault content you create, including the vault type, the names you enter for the vault's subjects (for example a couple, a new baby, a child, a student, or a business), the event or anchor date, the reveal schedule you choose, the prompts you select or write, and any host notes you add when you record an outcome.
- An optional cover photo you upload on a paid plan (see Section 7).
- Records of your purchases and plan, processed through Stripe (see Section 8).

Some information you enter, such as the names of a couple or a child, is about other people. You are responsible for having the appropriate basis to include that information. See Section 12 on minors.

3.2 Information guests provide

- The predictions you submit (text, numbers, or multiple-choice selections) and the reveal date you choose for each.
- An email address, if you provide one. Guest email is on by default so we can tell you when your prediction unlocks and how it turned out, because results are never shown back through the guest link. You may opt out of email; if you do, you will not receive an unlock notice or outcome update.
- An optional answer to a short feedback question shown after you submit, described in Section 3.5. Answering is voluntary.

Guests do not have accounts, and we do not collect guest names, phone numbers, mailing addresses, or uploads. While you are answering, a draft of your answers is stored only in your own browser on your own device and is not sent to us until you submit.

3.3 Information gifters provide

- The purchase record and the email address used for your receipt and for the notice that the recipient activated the vault.
- The single-use gift code generated for your purchase.

3.4 Information we collect automatically

- Basic technical and log data needed to operate and protect the Service, such as IP address, timestamps, and request data. We use this for security, rate limiting, and abuse prevention on the public guest form.
- Essential cookies set by our authentication provider so signed-in hosts and administrators stay logged in. We do not use advertising cookies, third-party analytics services, session recording, or heatmaps. See Section 14.

3.5 Feedback you give us

We ask for feedback directly inside the Service, in one place each for hosts and for guests. A host may see a short feedback card after sealing a vault. A guest may see one after submitting their predictions. Answering is always voluntary, and closing the card has no effect on anything else.

A feedback card asks how the Service is going, using a simple response such as thumbs up or thumbs down, and may include an optional comment limited to a short length. We never ask for your name, your email address, or any other identifying detail in a feedback card, and you should not put personal information into a comment.

Feedback responses are stored without identity. A stored response holds no account reference, no guest reference, no email address, no IP address, and no session identifier. What it does hold is:

- whether the response came from a host or a guest,
- the vault type, for example marriage or new baby,
- the vault the response relates to, for guest responses only,
- the date the response was given, as a date and not a precise time.

Host responses are deliberately not tied to a vault, because a vault has a single owner and that connection would identify the host.

We do keep a separate record of who was asked and when. That record holds an account reference for a host, or a guest reference for a guest, together with the date and whether the card was answered, closed, or opted out of. It exists only so that we do not ask the same host repeatedly and so that a host who opts out is never asked again. It holds none of what you said. It is never combined with the responses themselves, and the two are kept apart by design.

A host may permanently stop these cards using the "Don't ask me again" control on the card. That choice applies to that host's account and is not reversed by us.

This is our own feedback, collected inside our own Service. We do not use a third-party analytics, survey, or session-recording product to do it, and none is added to the Service.

We do not knowingly collect special categories of data. Please do not enter sensitive personal information (such as health, financial account details, or government identifiers) into a prediction, a prompt, or a feedback comment.

4. How we use information

We use personal information to:

- Create and operate vaults, seal predictions, and unlock them on schedule.
- Send transactional email through Resend: for hosts, notices that a vault was created, sealed, or has a reveal ready, and cap or upgrade notices; for guests, a thank-you, an unlock notice, and an outcome notice; for gifters, a receipt and an activation notice. Every guest email also carries a "create your own vault" link with a referrer code we use only for internal, aggregate attribution, never tied to any reward.
- Process one-time payments and gift purchases, and handle refunds, through Stripe.
- Provide support, resend a stuck email, or look up a gift code's status.
- Understand how well the Service is working and improve it, using the feedback described in Section 3.5.
- Keep the Service secure and prevent abuse, including rate limiting and a hidden honeypot field on the guest form.
- Maintain an owner-held backup of our data for recovery and portability (see Section 8.3 and our Terms).
- Comply with law, enforce our Terms, and protect our rights and the rights of others.

We do not use your information for behavioral advertising, and we do not send marketing email at launch. All email is transactional.

5. Legal bases for processing (EEA and UK users)

Where the EU or UK General Data Protection Regulation applies, we rely on:

- **Performance of a contract**, to provide the Service to hosts and gifters who create, purchase, or manage a vault.
- **Consent**, for a guest's optional email, for a feedback answer you choose to give, and for any processing where we ask for your permission. You can withdraw consent at any time.
- **Legitimate interests**, to secure the Service, prevent abuse, operate our backup, and run and improve the product, balanced against your rights. Asking for feedback and keeping the record of who has been asked rest on this basis.
- **Legal obligation**, to keep records we are required to keep and to respond to lawful requests.

6. Sealed predictions, and the one administrator exception

The core promise of VaultZombie is that a prediction stays sealed until its reveal date. We enforce this at the data layer: no guest, host, gifter, or support tool can read a sealed prediction before it unlocks, and dashboards show counts and status, such as "12 predictions sealed," never the words inside.

You should understand one deliberate exception, and we describe it here rather than hide it. The owner of VaultZombie holds an administrative control that can open a vault early. This control is limited, protected by multi-factor authentication, requires the administrator to type the vault's name to confirm and to record a written reason, and every use is written to an immutable audit log. Because opening a vault makes its contents readable, the administrator can, in those limited circumstances, read that content. We may use this control for reasons such as testing the Service, complying with a legal requirement, or responding to a request from the family of a deceased host. No host, guest, or gifter has any path to this control.

7. Cover photos

On paid plans, a host (never a guest) may upload one cover photo per vault. To protect privacy, when a photo is uploaded we strip embedded metadata, including any GPS location data that phone cameras attach, before storing it. We re-encode and resize the image, store it under a randomly generated file name, and validate the file by its content. Cover photos are stored in Replit object storage. A cover image is not sealed content; it is shown on the vault and to guests.

8. How we share information

We do not sell your personal information, and we do not share it for cross-context behavioral advertising.

8.1 Service providers (subprocessors)

We share information only with the small set of providers needed to run the Service:

- **Clerk**, for host and administrator authentication.
- **Stripe**, for payment processing. Payments are handled through Stripe Checkout, so card numbers never reach VaultZombie servers.
- **Resend**, for transactional email delivery.
- **Replit**, for application hosting, our database, and cover photo storage.
- **GitHub**, as the destination for our owner-held data backup (see Section 8.3).

Each provider processes information under its own terms and only to provide its service to us.

8.2 Legal and safety

We may disclose information if required by law, to respond to lawful requests, to enforce our Terms, or to protect the rights, safety, and property of Zombie Platforms LLC, our users, or the public.

8.3 Backups

We keep an owner-held backup of our full dataset, including sealed predictions, stored as plain text in a private repository controlled by the owner and treated as sensitive as the database itself. This backup exists so we can recover or move the Service. Access to the backup is restricted.

8.4 Business transfers

If Zombie Platforms LLC is involved in a merger, acquisition, financing, or sale of assets, information may be transferred as part of that transaction, subject to this Policy.

9. International data transfers

We operate from the United States, and our providers store and process data in the United States. If you use the Service from outside the United States, your information will be transferred to and processed in the United States and other countries where our providers operate, which may have different data protection laws than your own. Where required, we rely on appropriate safeguards, such as standard contractual clauses, for these transfers. By using the Service, you understand that your information will be processed as described here.

10. How long we keep information

- Vault and account data is kept for as long as your account and vault are active. A vault can run for up to ten years depending on the plan, and we keep its data for that period so it can unlock on schedule.
- Guest email and predictions are kept until the vault completes or is deleted.
- Feedback responses, described in Section 3.5, carry no identity and are kept as long as they are useful for understanding and improving the Service.
- The record of who was asked for feedback and when is kept for as long as the related account or guest record is kept, and is deleted with it.

- Purchase and financial records are kept as long as needed to meet legal, tax, and accounting requirements.
- Backups may retain data in version history after deletion from the live Service for a period, as part of normal recovery practice.

You can ask us to delete a vault or an account, and we will do so subject to records we are required to keep. See Section 11.

11. Your privacy rights

Depending on where you live, you may have some or all of the following rights.

11.1 EEA, UK, and similar regimes

You may request to access, correct, delete, or receive a portable copy of your personal information, and you may object to or ask us to restrict certain processing. Where we rely on consent, you may withdraw it at any time. You also have the right to lodge a complaint with your local data protection authority.

11.2 California (CCPA and CPRA)

If you are a California resident, you may request to know the personal information we collect and how we use and disclose it, request that we correct or delete it, and you have the right not to receive discriminatory treatment for exercising these rights. We do not sell or share personal information as those terms are defined under California law, so there is no sale or sharing to opt out of.

11.3 How to exercise your rights

Email us at privacy@zombieplatforms.com. We will verify your request as needed and respond within the time required by applicable law. Guests can ask us to delete their email address and their submitted predictions by contacting us at the same address. You may use an authorized agent where the law allows.

One limit is worth stating plainly. Because a feedback response under Section 3.5 is stored with no identifier of any kind, we have no way to find the responses a particular person gave. We cannot retrieve, correct, or delete an individual feedback response on request, because we cannot tell whose it is. The same design that protects your anonymity is what prevents us from locating it. We can, at your request, delete the record of your having been asked, and a host can stop being asked at any time using the control on the card.

12. Children and minimum age

The Service is offered worldwide, and we apply the lowest common minimum age together with local rules:

- No one under the age of 13 may use the Service or submit information through it, and we do not knowingly collect personal information from anyone under 13. This is our global floor.
- In places where the local digital-consent age is higher than 13 (some countries set 14, 15, or 16), a user below that local age must have the consent of a parent or guardian.
- Hosts and gift purchasers must be at least 18 years old, because they enter into a purchase.
- Guests between 13 and 17 may take part, and where required by local law a parent or guardian must consent.

Some vault types, such as New Baby and Child Growth, are about a child. In that case the child is the subject the host names, not a user of the Service. The host is responsible for having the right to include that information.

If you believe a child under 13 has given us personal information, contact privacy@zombieplatforms.com and we will delete it.

13. How we protect information

We take security seriously and design the product to reduce what can go wrong:

- The sealed-content rule is enforced once at the data layer, so predictions cannot be read before they unlock, except through the disclosed administrator control in Section 6.
- Administrator access requires multi-factor authentication, and sensitive administrator actions are logged to an immutable audit log.
- Card data is handled by Stripe and never reaches our servers.
- We minimize what we collect from guests, cap free-text length, strip photo metadata on upload, and use rate limiting and a honeypot to blunt abuse of the public guest form.
- Feedback responses are stored with no identifying information at all, and are kept separate from the record of who was asked, so that one cannot be used to unmask the other.
- We use industry-standard encryption in transit.

No method of storage or transmission is completely secure, and we cannot guarantee absolute security. Our backup, described in Section 8.3, stores sealed content as plain text in a restricted private repository.

14. Cookies and similar technologies

We use only essential cookies, set by our authentication provider, so that signed-in hosts and administrators remain logged in. We do not use advertising cookies, third-party analytics, session recording, or tracking pixels.

We do ask for feedback directly inside the Service, as described in Section 3.5. That is our own feature rather than a third-party analytics product, it runs only at the two moments described, and it sets no tracking cookie. If our use of cookies or similar technologies changes, we will update this Policy and, where required, ask for your consent.

15. Third-party links

The Service may link to third-party sites or services we do not control. Their privacy practices are their own, and we encourage you to read their policies.

16. Changes to this Policy

We may update this Policy from time to time. When we do, we will change the "Last updated" date above, and for material changes we will provide a more prominent notice where appropriate. Your continued use of the Service after an update means you accept the revised Policy.

17. Contact us
